

BIODIESEL TESTIMONIAL

CITY OF ROANOKE, USA

Illustrating their commitment to sustaining the environment and reducing greenhouse gas emissions, the City of Roanoke is converting their diesel fuel-powered public works and facilities vehicles and power equipment to Biodiesel fuel, a cleaner-burning, renewable diesel fuel replacement made primarily from soybean oil.

The City of Roanoke has converted 365 pieces of equipment, that's 100 percent of its diesel vehicles and equipment to Biodiesel.

This includes school buses, trucks, fire trucks, front-end loaders as well as assorted smaller equipment.

"Protecting the environment is one of the most important issues in Southwest Virginia and in America today," said Harris. "This action taken by the City of Roanoke is a significant step in the right direction.

The use of Biodiesel will help us reduce the carbon footprint in the Roanoke Valley and New River Valley."
