

# BIODIESEL TESTIMONIAL

## CUMMINS BIODIESEL DRAGSTER

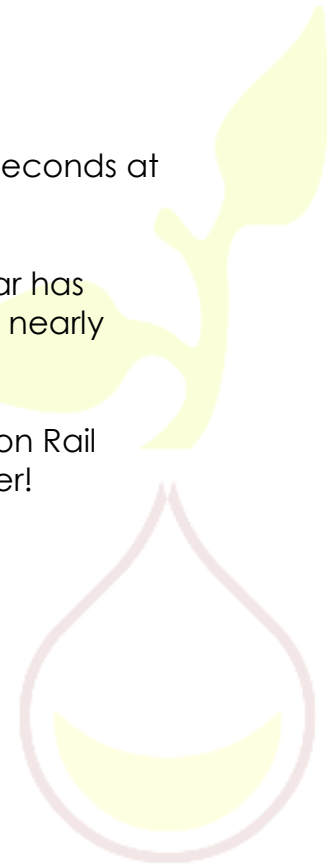

The Cummins Diesel Dragster is powered by B100 and ran 7.98 seconds at 270kph over the quarter mile.

The first diesel drag car ever into the 8's and now the 7's. This car has proven that the Cummins "B" engine is not only reliable, but has nearly unlimited performance potential.

Cummins are currently building a second car with a 6.7 Common Rail Cummins ISB to go even faster, with less smoke, and more power!
