

# BIODIESEL TESTIMONIAL

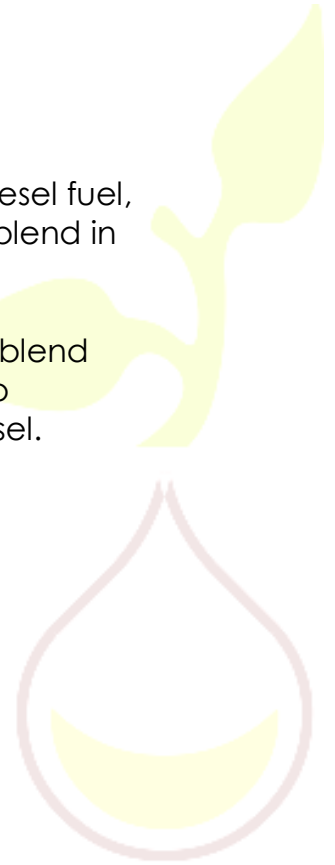

---

## MAMMOTH CAVE NATIONAL PARK

Mammoth Cave was the first Southeast Region Park to use Biodiesel fuel, converting all 25 pieces of its diesel equipment to B20 Biodiesel blend in 2001. The park used more than 30,000 litres of B20 last year.

The park's heavy equipment switched from diesel to a Biodiesel blend made from soybean oil. Even the park's lawn tractors and its two ferryboats operating on the Green River are powered by Biodiesel.
