

# BIODIESEL TESTIMONIAL

## CITY OF TACOMA

Our city started with B5 around 3 years ago on a limited number of waste trucks and now it has expanded to over 200 trucks running on B20 with ULSD.

These trucks consume about 150,000 litres per month. We are currently working on the expansion of Biodiesel use on other city trucks.

Our Biodiesel is solely based on Soy product and the potential use of B50 and B100 has been stipulated. We have had several cold days around 0°C with no fuel gelling issues.

As our weather changes we will continue to monitor the performance of our vehicles.

FUEL FOR OUR FUTURE
